

TEMPORARY CROP COVER

6.5 wide temporary crop cover fixed to screw augers is adaptable to a range of uses from temporary covers over seed and flower crops to a crop support greenhouse for vegetables. 1.5m to 2.4m post height, gothic shaped hoops with 32mm gal pipe, prevents condensation rain. The greenhouse is fixed to specially designed augers that are screwed into the ground using a dingo or equivalent making it easy to relocate in the future if soil contamination was a problem or relocation is necessary. These structures can be covered with shade cloth or Celloclim plastic. Sides can be left open or fitted with insect screen or shade cloth with roll-up curtains from solarwoven or plastic film. Aluminium gutter is used to connect two or three bays wide.

PROPAGATION HOUSE

7.5m Propagation House
